[1, 3, 5]

C++14 Function Deduced  
Return Type

```
auto filter_odds(std::vector<int> nums) {  
    auto odds = std::vector<int>{};  
    for (auto const num : nums)  
        if (num % 2 == 1)  
            odds.push_back(num);  
    return odds;  
}
```

C++11 auto

C++11 range-  
based for

```
auto filter_odds(std::vector<int> nums) {  
    auto odds = std::vector<int>{};  
    std::copy_if(  
        nums.begin(), nums.end(),  
        std::back_inserter(odds),  
        [](auto e) { return e % 2 == 1; });  
    return odds;  
}
```

C++11 lambda

```
auto filter_odds(std::vector<int> nums) {  
    auto odds = std::vector<int>{};  
    std::copy_if(  
        nums.begin(), nums.end(),  
        std::back_inserter(odds),  
        [](auto e) { return e % 2 == 1; });  
    return odds;  
}
```

C++14 generic lambda

```
auto filter_odds(std::vector<int> nums) {  
    auto odds = std::vector<int>{};  
    std::ranges::copy_if(  
        nums, std::back_inserter(odds),  
        [](auto e) { return e % 2 == 1; });  
    return odds;  
}
```

C++20 range overload

```
auto filter_odds(std::vector<int> nums) {  
    return nums  
        | std::views::filter(  
            [](auto e) { return e % 2 == 1; });  
}
```

C++20 Ranges

```
filterOdd xs = filter (\e -> mod e 2 == 1) xs
```

```
filterOdd xs = filter odd xs
```

`filterOdd = filter odd`

`filter odd`
